The complete range of Danelaw® LR breathable roof tile underlays are independently tested by the BRE. The zonal suitability for Danelaw® LR135, when used unsupported as follows:

BATTEN GAUGE	WIND UPLIFT RESISTANCE	WIND ZONES				
		1	2	3	4	5
≤ 345mm	993 Pa	✓	✓	✓*	✓*	✓*
≤ 250mm	2255 Pa	✓	✓	✓	✓	✓
≤ 100mm	>2255 Pa	✓	✓	✓	✓	✓

NOTE 1: Zone suitability applies only for underlays in applications where a well-sealed ceiling is present, ridge height is not greater than 15m, roof pitch is between 12.5° and 75°, site altitude is not greater than 100m, and no significant site topography is present. Other applications might require underlays with greater wind uplift resistance and it is advisable to seek professional advice.

NOTE 2: Zones 3 and 4 apply to Northern Ireland. Zone 3 applies to the Scilly Isles and Channel Islands. Zone 5 applies to the Shetland Islands.

* When used with separate lap tape

APPLICATION

The product should be installed in accordance with the manufacturer's installation guidelines and relevant clauses in BS 5534; *Slating and tiling for pitched roofs and vertical cladding Code of practice*, and BS 8000, *Workmanship on building sites, Code of practice for slating and tiling of roofs and walls*.

It is recommended that the ventilation guidelines in BS 5250, *Code of practice for control of condensation in buildings and NHBC Standards Chapter 7.2 Pitched Roofs* are followed. The level of roof ventilation required will depend on the building type, condensation risk, roof configuration and overall size of the roof.

DESIGN APPLICATIONS

Danelaw® LR135 can be installed draped over timber rafters or counter battens, or fully supported on sarking board or rigid insulation.
